

Код ошибки 1, ru

The screenshot shows the SoapUI interface with a SOAP response from `http://speller.yandex.net/services/spellservice`. The response is a `CheckTextsResponse` containing an `ArrayOfSpellResult`. The first `SpellResult` has an `error` with `code="1"`, `pos="4"`, `row="0"`, `col="4"`, and `len="7"`. The word is `успешно`. The second `SpellResult` has an `error` with `code="1"`, `pos="19"`, `row="0"`, `col="19"`, and `len="13"`. The word is `сабиседование`. The third `SpellResult` has an `error` with `code="3"`, `pos="24"`, `row="0"`, `col="24"`, and `len="6"`. The word is `томске`. The XPath Match Configuration dialog box is open, showing the XPath expression `declare namespace ns1='http://speller.yandex.net/services/spellservice'; //ns1:ArrayOfSpellResult[1]/ns1:SpellResult[1]/ns1:error[1]/@code` and the expected result `1`.

Код ошибки 3, ru

The screenshot shows the SoapUI interface with the URL `http://speller.yandex.net/services/spellservice`. The left pane displays the SOAP request XML, and the right pane displays the SOAP response XML. A dialog box titled "XPath Match Configuration" is open, prompting the user to specify an XPath expression and an expected result. The dialog includes a "Declare" section for namespaces and an "Expected Result" section with a text input field.

XPath Match Configuration

Specify XPath expression and expected result
declare namespaces with declare namespace
<prefix>='<namespace>';

XPath Expression

Declare

declare namespace ns1='http://speller.yandex.net/services/spellservice';
//ns1:ArrayOfSpellResult[ns1:SpellResult[2]/ns1:error[1]/@code

Expected Result

Select from current Test ☐ Allow Wildcards ☐ Ignore namespace
